

## Business Intelligence and Analytics

**B**usiness Intelligence and Analytics (BI&A) vertical supports business decision making by providing timely, accurate and reliable information to all levels of decision makers within an organization. We are in a position to support our clients on functional and technical aspects of implementing Oracle Business Intelligence Enterprise Edition (OBIEE) by designing comprehensive and effective performance monitoring dashboards and analytics to enable prompt decision support. The availability of extensive data warehousing and data mining capabilities allows for the provision of intelligence tools and analytical systems for business planning, financial reporting, Online Analytical Processing (OLAP), process automation and performance monitoring helping you to plan your organization's future strategy. The team has the expertise and capabilities required to structure the BI&A to suit different and varying business needs.

Our extensive experience includes:

- Experience in the design and implementation of Data Warehousing Solutions
- Provides intelligence tools and analytical systems for business planning and financial reporting
- Pre-built customized solutions to meet client specific requirements
- Designing effective and integrated performance review dashboards to enable timely decision support
- Highly qualified team of dynamic and enthusiastic professionals
- Integration of business information systems to one common platform enabling users to interact efficiently and effectively resulting in informed decision making
- Training clients and users to navigate the dashboards and creation of reports in the system

### Organizational MIS Framework Development

The BI&A Team at AHLBS will help your organization to map out processes in relation to Management Information Systems (MIS), identify Key Result Areas (KRAs) and the development of measurements, use business intelligence tools such as Oracle to develop reports, dashboards and disseminate key MIS via ibots, and various other mobile applications as per your requirements.

### Data Integration and Warehousing

In terms of Data Integration and Warehousing, the BI&A Team at AHLBS will assist you in the integration of organizational ERP systems to central warehousing modules in Oracle, develop a single source of truth for critical data generated in organizations, develop and maintain data warehouses to suit evolving business requirements and develop means of data security and access control.

### Development Analytics Support

The BI&A Team at AHLBS offers a range of support services in terms of Development Analytics. This includes the identification of data analytics requirements for decision making, use of Oracle Business Intelligence tools to meet such requirements via analytical reporting, what if analytics and other similar requirements. The team is also ready to help evolve your organizational analytics in line with changes in business environment.
